

A WESLEYAN BONANZA

What Is Being Done at the Daisy Mine and Mill.

HIGH GRADE CYANIDE'S

DIVIDEND EXPECTED BY THE FIRST OF THE YEAR.

A Flurry in Mammoth—This Favorite Tintic Security Causes Commotion in the Pit—To Dam the Colorado—Proposition Being Considered by the Good Hopes Company—The Galena Company—Annual Report Shows the Mine to Be in Good Condition—The Black Warrior—Fatal Mine Accident—The Monte Del Rey Incorporates—Silver and Lead—Ore and Bullion—Mining Notes and Personal.

Fed by the same immense porphyry dyke that undoubtedly gave life and existence to the great gold mines of Mercur, there is every reason to believe that the leading properties on the west dip of Camp Floyd district will, in time, make records as wealth producers equal to that already established by the Mercur mine, the Golden Gate, the Sacramento and Geyser.

As like conditions generally prevail, as the same dyke is no difficulty in demonstrating the fact that the mines of the west dip are almost identical reproductions of the older properties but to three miles to the east, as the new flies.

Much has been said regarding the mines of the west dip, of the La Grange, the Omaha, the Daisy, the Daisy, the Snowstorm and the Edna May, all of which are on the line of the great vein which cuts through that locality in a northerly and southerly direction, but it was not until the first time, the occasion of his visit to the Daisy mine and mill.

The Daisy, as is well known by the residents of Camp Floyd district, adjoins the Omaha group on the south, having been owned by the same party, the vein, the environments of its holdings embracing 100 acres of valuable ground.

The first object of interest that strikes the traveler from Mercur down Lexington canyon to its mouth is the Daisy mill and hoist, the plant being one of the best ever erected in the district, as far as solidly equipped and advantages go, as everything possible is done automatically, and every labor-saving device is employed, the consequence being that the cost of operation has been cut down to a merely nominal figure.

The hoist raises the ore up the incline shaft in steel skip, the mineral being dumped automatically into the ore bins, from where it works its own way to the crusher, then on to the rolls, and finally to the new 400-ton bin for prepared ore, from which the leaching tanks are filled, the plant having a capacity of treating 100 tons of mineral daily.

The precipitation tanks are also most conveniently arranged, and the entire works are a model of perfection and a monument to the builder.

The descent down the shaft is easily made in the steel skip, the incline being substantially logged and timbered from top to bottom.

One of the features on the Daisy almost at the grass roots, and the incline was sunk on the ledge on its dip almost at an angle of 45 degrees, the workings now having reached a depth of 150 feet, and finally to the new shaft, which is a fine grade of milling ore, and on an ore body ranging from 20 to 27 feet in width.

The principal drifts in the mine so far have been run on the 122, the 224, the 326 and the 440 levels, while between them considerable stoning is in progress, the ore being dumped down several different chutes, and from them into the cars, thus saving rehandling.

The first level has been run north and south on the vein for several hundred feet, the drifts on the second still further, while on the third the vein has been followed for a distance of 500 feet, the average value of the ore from top to bottom ranging from \$10 to \$25 per ton, while, as greater depth is attained, the ore zones are steadily gaining in size, and the value of the ore is well maintained, an improvement being noted of late in the faces of the several workings of the mine.

The ore from the mine, so far as demonstrated, is one of the best leaching minerals yet uncovered in the district, although occasional deposits of talc have been encountered, the test of the mill, which is now in operation, is a better part of July last, showing a recovery of values of from 80 to 85 per cent of gold, and while but 75 tons of ore is now being treated, it is expected shortly that the plant will be handling at least 100 tons daily, the tankage capacity being sufficient for this tonnage, the addition of water being such that it is required to bring the works up to its full limit, and these are now being put in.

The first shipment of cyanides was made on the 15th of August, and the product was equal in value to the best grade of cyanides yet sent out of the district. On the 2nd day of September the first consignment of cyanide was sent to the sampler, the lot being sold on assays showing values of \$18.12 to the pound, and A. H. Mayne, the manager, who is in charge of the company, who extended the courtesies of the day to the representative of The Herald, stated that it was the expectation to make a sale of cyanide on the 15th or 16th of the present month.

In fact, such progress has been made since the organization of the company and the beginning of active work in the development and operation of the property, the building of the mill and the making of other improvements, that the company now finds itself with a fine mill in operation, free from debt, and with money in the treasury, the expectation being that by the first of the year the payment of 1-cent dividends, or \$5,000, will begin, and while the distribution of wealth is undoubtedly be steadily maintained, the company will make it a rule to keep a good surplus on hand.

In a short resume article it is almost an impossibility to call attention to every point of interest in connection with the operations of any mining company. With the Daisy, as is necessary, as the prime factors in the successful operation of this property have already been referred to; among them being the seemingly inexhaustible quantities of good leaching ore uncovered, the hoist and reduction works in satisfactory operation, and the successful gold recovery recorded, and the fact that the company will soon be on a dividend-paying basis.

Besides the mine and mill, the company has the necessary buildings for the successful operation of the mine, such as the boarding house, which is provided over by M. V. Gernon, so long connected with the House of this city, while Fred Richmond has charge of the boarding house. The superintendent of the mill is vested in that veteran millman, Robert H. G. Heffron, while H. S. Colburn, the foreman of the mine, is giving the company excellent satisfaction.

The Daisy company is capitalized at \$60,000 shares of a par value of \$3 per

share, the officers of the company being E. A. Benson, president; A. H. Mayne, vice president and general manager; H. E. Carey, secretary; P. M. Wilson, treasurer; and these, with George F. Wright, form the directory, the principal office of the company being at Mercur.

A FLURRY IN MAMMOTH.

This Favorite Tintic Security Causes Commotion in the Pit.

The call of the stock exchange yesterday was characterized by periods of inactivity, as well as by a few seasons when the bulls and bears frayed around in the pit in an excited manner, the wind-up showing a goodly list of stock transfers.

Mammoth was the feature of the hour and the caller dwelt on this stock for at least 15 minutes before passing to the next security, sales being posted all the way from \$1.32 to \$1.35, the bears being a ready seller at 30 cents. Omaha, Nothing was done in the way of transfers, and the call dragged until Geyser-Mammoth was reached, this favorite Mercur stock being strong and active, and transfers at a slight advance. Galena received a black eye and was inactive, while Mercur was quiet, the quotations established being on the basis of a decline off. Sacramento chronicled sales, and was in excellent form at the close.

In the unlisted stocks, Chloride Point was not neglected, although it was only falling at the close of the day, at which figure 200 shares changed hands. Lower Mammoth was inclined to be weak at first, but later on it rallied and was a ready seller at 30 cents. Omaha, while not figuring in the dealings of the day, braced up considerably and had secured gains at the close of the day. The Snowstorm and the Edna May, all of which are on the line of the great vein which cuts through that locality in a northerly and southerly direction, but it was not until the first time, the occasion of his visit to the Daisy mine and mill.

The Daisy, as is well known by the residents of Camp Floyd district, adjoins the Omaha group on the south, having been owned by the same party, the vein, the environments of its holdings embracing 100 acres of valuable ground.

The first object of interest that strikes the traveler from Mercur down Lexington canyon to its mouth is the Daisy mill and hoist, the plant being one of the best ever erected in the district, as far as solidly equipped and advantages go, as everything possible is done automatically, and every labor-saving device is employed, the consequence being that the cost of operation has been cut down to a merely nominal figure.

The hoist raises the ore up the incline shaft in steel skip, the mineral being dumped automatically into the ore bins, from where it works its own way to the crusher, then on to the rolls, and finally to the new 400-ton bin for prepared ore, from which the leaching tanks are filled, the plant having a capacity of treating 100 tons of mineral daily.

This Favorite Tintic Security Causes Commotion in the Pit.

The call of the stock exchange yesterday was characterized by periods of inactivity, as well as by a few seasons when the bulls and bears frayed around in the pit in an excited manner, the wind-up showing a goodly list of stock transfers.

Mammoth was the feature of the hour and the caller dwelt on this stock for at least 15 minutes before passing to the next security, sales being posted all the way from \$1.32 to \$1.35, the bears being a ready seller at 30 cents. Omaha, Nothing was done in the way of transfers, and the call dragged until Geyser-Mammoth was reached, this favorite Mercur stock being strong and active, and transfers at a slight advance. Galena received a black eye and was inactive, while Mercur was quiet, the quotations established being on the basis of a decline off. Sacramento chronicled sales, and was in excellent form at the close.

In the unlisted stocks, Chloride Point was not neglected, although it was only falling at the close of the day, at which figure 200 shares changed hands. Lower Mammoth was inclined to be weak at first, but later on it rallied and was a ready seller at 30 cents. Omaha, while not figuring in the dealings of the day, braced up considerably and had secured gains at the close of the day. The Snowstorm and the Edna May, all of which are on the line of the great vein which cuts through that locality in a northerly and southerly direction, but it was not until the first time, the occasion of his visit to the Daisy mine and mill.

The Daisy, as is well known by the residents of Camp Floyd district, adjoins the Omaha group on the south, having been owned by the same party, the vein, the environments of its holdings embracing 100 acres of valuable ground.
